Sequence 80, Applicat patent No. 6218150 GENERAL INFORMATION:

Application US/09446504

APPLICANT:
APPLICANT:

UEMORI, Takashi SATO, Yoshimi

TYPE: PRT

```
US-09-144-085-2

Sequence 2, Application US/09144085

Patent No. 6280999

GENERAL INFORMATION:
APPLICANT: Gustafsson, Claes
APPLICANT: Betlach, Mary C.
APPLICANT: Ashley, Gary
APPLICANT: Julien, Bryan
APPLICANT: Ziermann, Rainer
ITILE OF INVENTION: SORANGIUM POLYKETIDE SYNTHASES AND
ITILE OF INVENTION: THEREFOR
ITILE OF INVENTION: THEREFOR
CURRENT APPLICATION NUMBER: US/09/144,085

CURRENT APPLICATION NUMBER: US/09/144,085
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş

The protein is homologous to yeast RPD3 and HDA1. The polynucleotide sequence is used in the method of the invention. The specification describes a method for regulating gene expression in transgenic plants. The method comprises modifying histones by introducing chimeric nucleotide sequences which have regulatory elements in operative encoding histone deacetylase. The method is useful for regulating the developmental, physiological or biochemical pathway within a plant, particularly for repressing ethylene-responsive phenotypes (e.g. inhibition of hypocotyl elongation). The method is also useful as a functional test for identifying a phenotype associated with perturbing a gene. The histone deacetylase genes are useful for altering the development of an organism.

This enzyme responsible for removing acetyl modifications, may be localised to promoters targeted for repression by other proteins that associate with HD and specifically bind regulatory elements in promoter DNA. The HD nucleotide sequence can be used for producing transgenic plants with increased disease resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Additionally, compositions find use in screening for toxins that affect pathogenicity and in determining which disease response promoters are regulated by histone deacetylase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; Page 49-51; 87pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                В
                                                                                                                                                                                                                                                                                                                                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               designated AtrPDJA. The protein is homologous to yeast RPDJ and HDA1. The polynucleotide sequence is used in the method of the invention. The specification describes a method for regulating gene expression in transgenic plants. The method comprises modifying histones by introducing chimeric nucleotide sequences which have regulatory elements in operative ensociation with a gene of interest or with a nucleotide sequence encoding histone deacetylase. The method is useful for regulating the developmental, physiological or biochemical pathway within a plant, particularly for repressing ethylene-responsive phenotypes (e.g. inhibition of hypocotyl elongation). The method is also useful as a functional test for identifying a phenotype associated with perturbing a gene. The histone deacetylase genes are useful for altering the development of an organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Methods for regulating gene expression in transgenic plants, e.g. repressing ethylene-responsive phenotypes (e.g. inhibition of hypocotyl elongation), comprises introducing genes encoding histone deacetylase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

The present invention describes a method of suppressing the expression a gene of interest by introducing into the cell a protein containing a DNA binding site and a chromatin inactivation portion, or a nucleotide encoding such a peptide. Preferably the chromatin inactivation portion part of the histone deacetylation (HDAC) complex. The method can be use in disease treatment, for example in the treatment of cancer by the suppression of oncogenes, and in the production of disease models.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Suppressing expression of selected gene for treating cancer, involves introducing peptide comprising nucleic acid binding portion that binds to or associated with selected gene and chromatin inactivation portion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAB67165 standard;

                                                                                                                                                         plant histone deacetylases. The invention relates to isolated rice, soybean and wheat nucleic acid fragments encoding HDL. It also relates to the construction of a chimeric gene encoding all a portion of HDL, in sense or antisense orientation, where expression of the chimeric gene results in production of altered levels of HDL in a transformed host cell. The availability of
                                                                                                              nucleic acid sequences encoding (portions) of histone deacetylase proteins will facilitate studies of global transcriptional regulation in eukaryotic cells, and will also provide mechanisms
                                                                        Sequence

The HD nucleotide sequence can be used for producing transgenic plants with increased disease resistance. Additionally, compositions find use in screening for toxins that affect pathogenicity and in determining which disease response promoters are regulated by histone deacetylase.

This enzyme responsible for removing acetyl modifications, may be localised to promoters targeted for repression by other proteins that associate with HD and specifically bind regulatory elements in promoter DNA. The HD nucleotide sequence can be used for producing transgenic plants with increased disease resistance. Additionally, compositions find use in screening for toxins that affect pathogenicity and in determining which disease response promoters are regulated by histone deacetylase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; Page 58-60; 87pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of a C-terminal portion of rice histone deacetylase 1 (HD1), a chromatin associated protein, as deduced from a cDNA contly (see AA25825) obtained from cDNA clones isolated from rice callus, 15-day-old leaf and 15-day-old seedling cDNA libraries on the basis of homology to other plant histone deacetylases. The invention relates to isolated rice, soybean and wheat nucleic acid fragments encoding HD1. It also relates to the construction of a chimeric gene encoding all or a portion of HD1, in sense or antisense orientation, where expression of the chimeric gene results in production of altered levels of HD1 in a transformed host cell. The availability of nucleic acid sequences encoding (portions) of histone deacetylase proteins will facilitate studies of global transcriptional regulation in eukaryotic cells,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           studies of global transcriptional regulation in eukaryotic cells, and will also provide mechanisms to control transcriptional gene regulation in plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Page 25-26; 36pp; English.

                                                                                                                                                                                                              influencing cell cycle progression or to modulate gene transcription. The products can be used for diagnosis and therapy. They can be used, for example, to treat tumours or proliferative disorders or spermatogenesis, osteogenesis, chondrogenesis or the differentiation of progenitor cells. They can also be used to treat psoriasis, bone diseases, fibroproliferative disorders, degenerative disorders, or for repair of cartilage, increasing bone density, liver repair subsequent to a partial population, increasing bone density, liver repair subsequent to a partial population.
                                                        also be used in cell cultures.
note: in the claims, the full length HDl sequence is
referred to as SEQ. ID. No.2; from the disclosure it
                                                                                                                                     hepatectomy, to promote regeneration of lung tissue in the treatment of emphysema, or for inducing tolerance in autoimmune diseases, and transplant recipients. HDx inhibitors can be used as anti-fungal agents, preservatives in foodstuff, feed supplements for promoting weight gain i
                                                                                                                                                                                                                                                                                                                                                        polypeptide, designated HDI. The HDx polypeptides are capable of modulating proliferation survival and differentiation of cells. The proteins are able to alter chromatin structure by descetylating histones such as H3 or H4. They have the ability to modulate cell growth by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated histone deacetylase polypeptide(s) and genes - used develop products for modulating the proliferation, survival or differentiation of cells, e.g. for treating tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Histone deacetylase gene; HDx; HDl; HDx polypeptide; deacetylation; H3 H4; cell differentiation; chromatin structure; cell cycle progression; proliferative disorder; fibroproliferative disorder;
